Summary

AI engineer (2027) who builds the **evaluation, tracing and testing** that keeps LLM systems honest: **eval harnesses** that catch regressions when a prompt or model changes, **trace systems** that pin a bad output to the exact step that broke, and **test suites** written from real failures. Solid **Python** (APIs, async, JSON, pytest, stack traces); I ship daily with **Claude Code and Cursor but understand every line I merge**. I also work in **biomedical AI** (four published papers, biomarker research), so FOXO's preventive-care mission is one I actually care about. CGPA 9.86/10, Rank 1.

Projects

Recoup, Eval Harness & Regression Suite github.com/TEKURU-ZENO/Recoup

Python, deterministic checks, grounding validator, seed-controlled versioned benchmark, pytest

- Built an **eval harness** for an LLM system: **deterministic checks** plus a grounding validator (0.0% ungrounded), and a **seed-controlled, versioned benchmark** so a prompt or model change can never silently regress.
- Backed it with **132 pytest tests** covering the failure modes I actually hit, turned into a **regression suite**, and I can defend every scoring choice I made.

HECATE, Trace System & Observability github.com/TEKURU-ZENO/HECATE

Python, distributed tracing (Jaeger), per-step logging, latency & cost metrics, Prometheus

- Built a **trace system** that logs **every step, tool call and latency** with distributed tracing, so a bad output can be traced back to the **exact step that broke**, with metrics on cost and performance.

SELENE-OS, Structured Outputs, Tool Calling & Agents github.com/TEKURU-ZENO/SELENE-OS

Python, Pydantic (structured outputs), tool calling, LangGraph (agent framework), deterministic replay

- Built agents with **structured outputs (Pydantic)**, **tool calling** and an **agent framework (LangGraph)**, plus deterministic replay so a run can be reproduced step by step.

PERSEPHONE, Precision-Oncology Decision Support github.com/TEKURU-ZENO/PERSEPHONE

Node.js, multi-agent recommendations, DAG orchestration, knowledge graph, tests

- Built an **evidence-grounded precision-oncology decision-support** app: **multi-agent** recommendations over a knowledge graph with **DAG orchestration**, health-domain AI that has to justify every output.

Experience

Regacore Remote

Technical and Creative Intern *Jun 2026 -- Present*

- Work on **biomarker research**: built the backend and data handling, and own the correctness of what ships, taking an SOP and running with it.

Airawat Research Foundation (IIT Kanpur Centre of Excellence) Remote

Full Stack AI Engineer Intern *Jul 2026 -- Sep 2026*

- Built and deployed **LLM systems** behind Python APIs, investigated failures from traces, wrote tests that reproduced them, and fixed the root cause through code review.

Sri Jayaram Infotech Pvt Ltd Remote

AI/ML Developer Intern --- delivered to a live client *Jan 2026 -- Jun 2026*

- Shipped AI features into a live product, **pulled traces to find what broke**, reproduced issues with tests, and improved reliability in production.

Education, Publications & Recognition

SRM Institute of Science and Technology, Vadapalani Chennai, India

B.Tech, Computer Science and Engineering *CGPA 9.86 / 10* *Rank 1, Overall Proficiency* *2023 -- 2027*

- **Four peer-reviewed publications in biomedical AI** (including fine-tuned biomedical transformers, BioGPT-DDI, with clean train/validation/test design). Aperture 3.0 open-source merged upstream. Top 1000 Builders from 10,000+, OpenAI × Outskill (2026).

Technical Skills

Python	APIs, async, JSON, **pytest**, reading stack traces, clean typed code (Pydantic), packaging
Evaluation	Eval harnesses, deterministic checks, LLM-as-judge, grounding, graders, versioned datasets & schemas, regression suites, benchmarking
Tracing / Obs	Per-step tracing, tool-call & latency & token-cost logging, distributed tracing (Jaeger), monitoring (Prometheus, Grafana)
LLM / Agents	LLM APIs, structured outputs, tool calling, agent frameworks (LangGraph), RAG, prompt engineering, fine-tuning (PyTorch)
Workflow	Daily Claude Code & Cursor with full understanding of merged code, Git, real codebases, code review, product thinking
Domain	Biomedical / health AI, four publications, biomarker research; genuine interest in preventive care & longevity
